EXPERIENCE:

2018 – Web Developer/Student

- Completed LaunchCode CoderGirl Web Development class
- Learned HTML 5, CSS 3, and JavaScript
- Completed class projects which included an interactive basic website

2018 – 2019   Graphic Designer/Web Assistant – BAE Systems

- Conducted web consults for customers requesting their sites be interactive and have smooth UI/UX
- Created over a dozen graphics for customers needing to convey their data analysis visually
- Provided support for the office website by conducting meetings on how to make the code more efficient and bring the website framework up to date
- Offered JavaScript support to other team members by reworking some of the functions of the website to make it more user friendly and have better UX
- Used JIRA to track products and keep customers up to date on the status of their products and requests

2019 – Present   Web Developer – SAIC

- Provided web support to customer by maintaining three different websites by updating them with current news and events for the workforce to stay up to date on the N2W construction project
- Maintained website content flow by having regular web meetings with the customer team and providing several channels (email, RocketChat, Slack, phone) with which they could contact the web team with requests and open communication
- Tracked requests and their progress in Redmine which gave the team an insight to the progress of their requests
- Met with senior leaders to discuss their needs for the website and worked to give them a space where they could share their data
- Used GeoAxis to provide certain customers with secure login to a version of website that featured sensitive content
- Completely recreated the public facing website for the N2W project taking it from an HTML standard website to an Angular 8 single page application framework and successfully launching the site to many kudos from senior leadership
- Created all aspects of the Angular site using the Angular CLI and worked on every part of the site in some form
- Created the site to be mobile first using Bootstrap 4 for Angular
- Participated in every section of website creation from using and creating services to employing Angular shortcuts (ngFor, ngIf, ngClass, etc) to create a fully functioning and efficient website
- Created web related graphics for use on the website to get web ideas across as quickly and as visually pleasing as possible
- Assisted in creating work flows with PCF and Jenkins to aid in website deployment from test to production

EDUCATION:

- Bachelors in Art, Benedictine College – May 2017
- LaunchCode Codergirl Web Development – June 2018
